

Table 2: Counts and Percentages of Encounters with Procedure Codes by VAD Type

Inpatient Encounters (n=14,253,584)		
Coded VAD Procedure	Counts	Percentage
Non-tunneled CVC	9,964	0.067%
PICC	5,769	0.040%
PIV/Midline	533	0.004%
Total (Any VAD)	15,833	0.111%

Device breakdown counts do not add up to the total count as the total count included encounters with one or more VAD procedure codes while the breakdown counts included encounters with a specific device procedure code. Since one patient can receive more than one device during a single encounter, the breakdown count is expected to be higher than the total count.
